

EXTREME HEAT

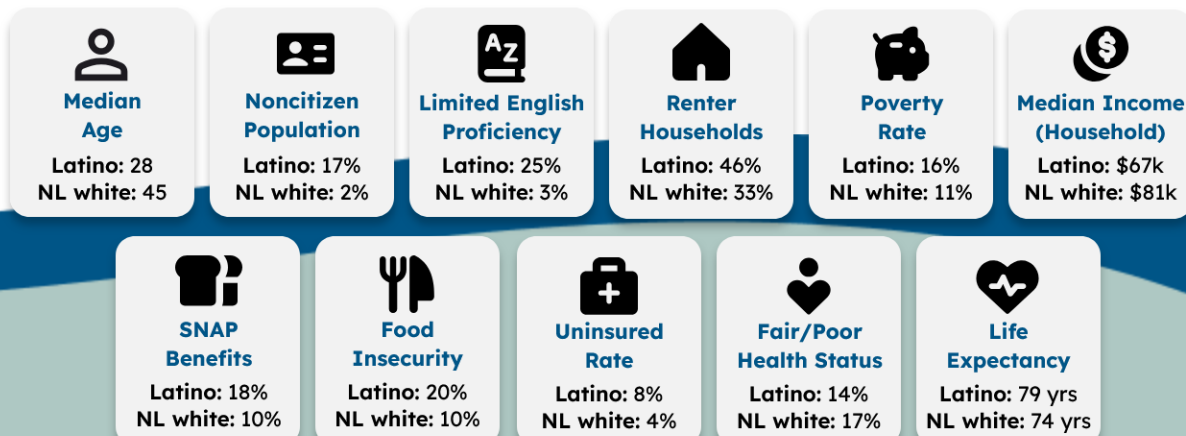

Stanislaus County

County Statistics

Factors Influencing Exposure to Extreme Heat

NL white = Non-Latino white

Neighborhood Statistics

Extreme Heat Days

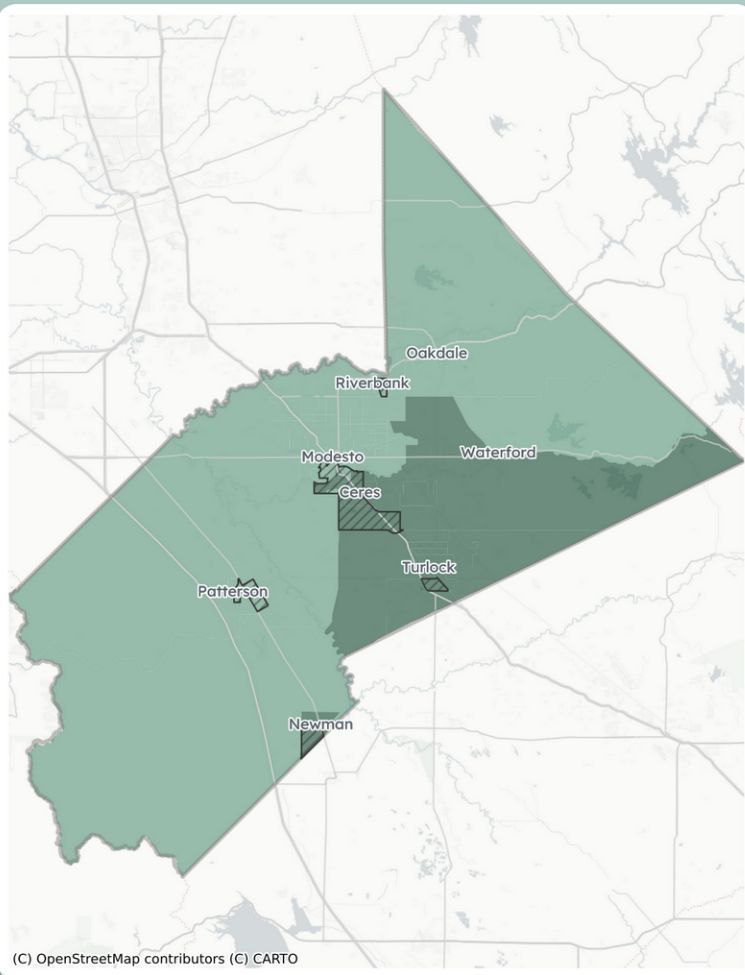

Latino Neighborhoods and Exposure to Extreme Heat Days ($\geq 90^\circ\text{F}$), 2018-2022

County Average: 120 days
State Average: 51 days

Latino neighborhoods = Census tracts with 70%+ Latino residents
NL white neighborhoods = Census tracts with 70%+ NL white residents

!! Extreme heat days are defined as days where the temperature is at or above 90°F . Exposure to extreme heat poses significant health risks.

(C) OpenStreetMap contributors (C) CARTO

Annual Number of Extreme Heat Days (2018-2022)

At 90°F , the risk of heat-related illnesses and conditions increases significantly.

Latino neighborhoods	NL white neighborhoods
120 days	117 days
average days $\geq 90^\circ\text{F}$ annually	

Longest Period of Consecutive Extreme Heat Days (2022)

The Federal Emergency Management Agency defines a period of extreme heat in most of the U.S. as a period of 2 to 3 days above 90°F .

Latino neighborhoods	NL white neighborhoods
69 days	71 days
consecutive days $\geq 90^\circ\text{F}$ annually	

Projected Number of Extreme Heat Days by Mid-Century (2035-2064)

Looking forward, NL white neighborhoods are projected to experience a greater number of extreme heat days.

Latino neighborhoods	NL white neighborhoods
122 days	127 days
expected days $\geq 90^\circ\text{F}$ annually

Barriers and Facilitators To Preventing Heat Exposure

Tree Canopy

Tree canopy is land shaded by trees.
Less tree canopy (fewer trees) = Increased exposure to extreme heat

Impervious Surfaces

Impervious surfaces are water-resistant surfaces such as concrete, asphalt, and stone.
More impervious surfaces (like paved roads) = Increased exposure to extreme heat

Older Housing Units

Older housing units are homes built before 1970 that often have poor insulation and inefficient HVAC systems.
More older homes = Increased exposure to extreme heat

Workers in Heat-Exposed Industries

Industries with the highest exposure to extreme heat include agriculture, construction, waste management, and warehousing. Jobs in these sectors carry increased risks of heat-related illnesses such as heat stroke, dehydration, chronic heat stress, and even premature death.

Health

Extreme heat poses serious health risks, especially for people with conditions like heart disease, asthma, diabetes, and obesity. These individuals are more vulnerable because heat places extra stress on the body, worsening symptoms and increasing the risk of medical emergencies.

Asthma Attacks

Heat-Related Emergency Department Visits

Heat-related emergency room visits serve as a critical indicator of a neighborhood's vulnerability to extreme temperatures and the effectiveness of its heat mitigation strategies.

Disadvantaged Communities

The CA Environmental Protection Agency defines disadvantaged communities based on their environmental pollution burden and population characteristics. Under Senate Bill 535, revenue from CA's Cap-and-Trade Program is partly directed toward these communities through the CA Climate Investments program to reduce pollution, enhance climate resilience, and improve health and economic well-being.
