# **Neighborhood Statistics**

## **Air Pollutants**

# Latino Neighborhoods and Exposure to Particulate Matter 2.5 (PM2.5), 2015–2017

Note: µg/m³ = one-millionth of a gram per cubic meter of air

Note: California's state standard for PM2.5 is an annual average of 12 µg/m³, while the federal standard is 9 µg/m³. There is no state or federal or state standard for Diesel PM.

### PM2.5

**PM2.5** is produced from sources like vehicle exhaust, wildfires, and industrial activity. These fine air particles enter the lungs and bloodstream and worsen conditions like asthma and heart disease.

Latino neighborhoods had <u>about the same exposure</u> to PM2.5 similar to NL white neighborhoods.

9 μg/m³ Latino neighborhoods

**9** μg/m³

NL white neighborhoods

Annual mean concentration

## **Diesel PM**

**Diesel emissions** from vehicles and heavy-duty equipment release harmful particulate matter. Exposure to diesel exhaust can raise blood pressure, trigger heart attacks, and worsen lung conditions.

Latino neighborhoods had  $\underline{\text{higher exposure}}$  to diesel PM than NL white neighborhoods.

**0.25** tons/year Latino neighborhoods

**0.12** tons/year NL white neighborhoods

#### Latino Policy & Politics Institute UCLA Climate & Health Dashboard

# **Neighborhood Statistics (cont.)**

# **Proximity to Major Sources of Air Pollution**

Note: Exposure and proximity scores take into account the number of sites/facilities and their proximity to neighborhoods. Higher scores = more exposure to pollutants for residents.

Cleanup sites, such as Superfunds, are polluted with materials like lead and asbestos. Examples include old and abandoned processing plants and manufacturing facilities.

### **Exposure Score**

13

Latino neighborhoods **NL** white neighborhoods

## Hazardous waste facilities are

treatment, storage, and disposal sites. They can release toxic substances such as carcinogens, mercury, and asbestos into the air, water, and soil.

#### **Exposure Score**

0.2 0.8

Latino neighborhoods NL white neighborhoods

RMP facilities are sites where hazardous chemicals—like propane, pesticides, ammonia, and explosives—are present, posing risks to the environment and communities if released.

#### **Proximity Score**

0.7 0.2

Latino neighborhoods **NL white** neighborhoods

# **Vehicle Types and Traffic**

#### Lower-emission vehicles (LEVs)

use battery electric, plug-in hybrid, or hybrid technology to reduce greenhouse gas emissions.

% of LEVs owned

3% 19%

Latino neighborhoods **NL** white neighborhoods

Clunker vehicles (vehicles 20 years or older) emit high levels of pollutants because they lack advanced emission-control equipment.

% of clunker vehicles owned

12%

Latino neighborhoods **NL** white neighborhoods near major roadways face greater exposure to harmful emissions released from vehicles.

**Traffic density** measures the concentration of vehicles on roads within an area. Neighborhoods

#### Vehicle kilometers per hour

520 km/hr 424 km/hr

Latino neighborhoods **NL** white neighborhoods

# **Vulnerable Groups**

Age

Children and older adults are more vulnerable to air pollution and have a higher risk of developing respiratory and cardiovascular diseases.

6% ages 0-5 8%

ages 65+ Latino neighborhoods

4% ages 0-5

23% ages 65+

NL white neighborhoods

## Health

Air pollution worsens pre-existing health conditions like asthma and coronary heart disease, increasing emergency visits and health complications. Long-term exposure to air pollution can cause chronic illness and premature death.

#### % of Adults (18+) with Pre-Existing Conditions

4%

Latino **NL** white neighborhoods neighborhoods

**Coronary Heart Disease** 

11% Latino

neighborhoods neighborhoods

**Asthma** 

# Low Birth Weight (LBW) Babies

LBW babies are born under 5 lbs. LBW increases the risk of infant mortality, developmental delays, and chronic health conditions. Exposure to air pollution, such as PM2.5, contributes to higher rates of LBW

babies.

Latino **NL** white neighborhoods neighborhoods

Asthma Attacks

## Disadvantaged Communities

The CA Environmental Protection Agency defines disadvantaged communities based on their environmental pollution burden and population characteristics. Under Senate Bill 535, revenue from CA's Cap-and-Trade Program is partly directed toward these communities through the CA Climate Investments program to reduce pollution, enhance climate resilience, and improve health and economic well-being.
