# **Neighborhood Statistics**

**Air Pollutants** 

# Latino Neighborhoods and Exposure to Particulate Matter 2.5 (PM2.5), 2015–2017

Note: μg/m³ = one-millionth of a gram per cubic meter of air

Note: California's state standard for PM2.5 is an annual average of 12 μg/m³, while the federal standard is 9 μg/m³. There is no state or federal or state standard for Diesel PM.

#### PM2.5

**PM2.5** is produced from sources like vehicle exhaust, wildfires, and industrial activity. These fine air particles enter the lungs and <u>bloodstream and</u> worsen conditions like asthma and heart disease.

Latino neighborhoods had <u>lower exposure</u> to PM2.5 similar to NL neighborhoods.

13.0 μg/m³
Latino neighborhoods

**14.0** μg/m³

**NL** neighborhoods

Annual mean concentration

### **Diesel PM**

**Diesel emissions** from vehicles and heavy-duty equipment release harmful particulate matter. Exposure to diesel exhaust can raise blood pressure, trigger heart attacks, and worsen lung conditions.

Latino neighborhoods had <u>higher exposure</u> to diesel PM than NL neighborhoods.

**0.1** tons/year Latino neighborhoods

# **Neighborhood Statistics (cont.)**

## **Proximity to Major Sources of Air Pollution**

Note: Exposure and proximity scores take into account the number of sites/facilities and their proximity to neighborhoods. Higher scores = more exposure to pollutants for residents.

Cleanup sites, such as Superfunds, are polluted with materials like lead and asbestos. Examples include old and abandoned processing plants and manufacturing facilities.

#### **Exposure Score**

Latino neighborhoods **NL** neighborhoods

#### Hazardous waste facilities are

treatment, storage, and disposal sites. They can release toxic substances such as carcinogens, mercury, and asbestos into the air, water, and soil.

#### **Exposure Score**

0.3 0.3 Latino neighborhoods **NL** neighborhoods

RMP facilities are sites where hazardous chemicals—like propane, pesticides, ammonia, and explosives—are present, posing risks to the environment and communities if released.

#### **Proximity Score**

1.1 0.7

Latino neighborhoods **NL** neighborhoods

# **Vehicle Types and Traffic**

## Lower-emission vehicles (LEVs)

use battery electric, plug-in hybrid, or hybrid technology to reduce greenhouse gas emissions.

% of LEVs owned

1% 3%

Latino neighborhoods

**NL** neighborhoods

**Clunker vehicles** (vehicles 20 years or older) emit high levels of pollutants because they lack advanced emission-control equipment.

% of clunker vehicles owned

12% 11%

Latino neighborhoods **NL** neighborhoods

vehicles on roads within an area. Neighborhoods near major roadways face greater exposure to harmful emissions released from vehicles.

**Traffic density** measures the concentration of

#### Vehicle kilometers per hour

324 km/hr 398 km/hr

Latino neighborhoods **NL** neighborhoods

## **Vulnerable Groups**

Age

Children and older adults are more vulnerable to air pollution and have a higher risk of developing respiratory and cardiovascular diseases.

9% ages 0-5

10% ages 65+

NL neighborhoods

#### Health

Air pollution worsens pre-existing health conditions like asthma and coronary heart disease, increasing emergency visits and health complications. Long-term exposure to air pollution can cause chronic illness and premature death.

#### % of Adults (18+) with Pre-Existing Conditions

6% Latino

neighborhoods neighborhoods **Coronary Heart Disease**

**76.6** 

89.1 NL

Latino neighborhoods neighborhoods

Asthma Attacks

#### Low Birth Weight (LBW) Babies

LBW babies are born under 5 lbs. LBW increases the risk of infant mortality, developmental delays, and chronic health conditions. Exposure to air pollution, such as PM2.5, contributes to higher rates of LBW babies.

## Disadvantaged Communities

The CA Environmental Protection Agency defines disadvantaged communities based on their environmental pollution burden and population characteristics. Under Senate Bill 535, revenue from CA's Cap-and-Trade Program is partly directed toward these communities through the CA Climate Investments program to reduce pollution, enhance climate resilience, and improve health and economic well-being.
