## **Neighborhood Statistics**

**Extreme Heat Days** 

Latino Neighborhoods and Exposure to Extreme Heat Days (≥ 90°F), 2018-2022

Latino neighborhoods = Census tracts with 70%+ Latino residents
NL white neighborhoods = Census tracts with 70%+ NL white residents

**Extreme heat days** are defined as days where the temperature is at or above 90°F. Exposure to extreme heat poses significant health risks.

## Annual Number of Extreme Heat Days (2018-2022)

At 90°F, the risk of heat-related illnesses and conditions increases significantly. **Latino** neighborhoods **NL white** neighborhoods

18 days

17 days

average days ≥ 90°F annually

# Longest Period of Consecutive Extreme Heat Days (2022)

The Federal Emergency Management Agency defines a period of extreme heat in most of the U.S. as a period of 2 to 3 days above 90°F. **Latino** neighborhoods

NL white neighborhoods

7 days

7 days

consecutive days ≥ 90°F annually

# Projected Number of Extreme Heat Days by Mid-Century (2035–2064)

Looking forward, NL white neighborhoods are projected to experience a greater number of extreme heat days.

## **Neighborhood Statistics (cont.)**

### **Barriers and Facilitators To Preventing Heat Exposure**

#### **Tree Canopy**

Tree canopy is land shaded by trees. Less tree canopy (fewer trees) = **Increased** exposure to extreme heat

% of Land with Tree Canopy

4%

26% **NL** white

Latino neighborhoods

neighborhoods

#### **Impervious Surfaces**

Impervious surfaces are water-resistant surfaces such as concrete, asphalt, and stone.

More impervious surfaces (like paved roads) = Increased exposure to extreme

% of Land with Impervious Surfaces

73%

Latino neighborhoods

39% NL white neighborhoods

#### **Older Housing Units**

Older housing units are homes built before 1970 that often have poor insulation and inefficient HVAC systems. More older homes = Increased exposure to extreme heat

% of Older Housing Units

71%

Latino neighborhoods

67% **NL** white neighborhoods

#### **Vulnerable Groups**

#### Age

Children and older adults are at higher risk for heat-related illnesses.

**25%** 8% ages 0-18 ages 65+ Latino neighborhoods

18% 23% ages 0-18 ages 65+ NL white neighborhoods

#### **Workers in Heat-Exposed Industries**

Industries with the highest exposure to extreme heat include agriculture, construction, waste management, and warehousing. Jobs in these sectors carry increased risks of heat-related illnesses such as heat stroke, dehydration, chronic heat stress, and even premature death.

% of Workers in Heat-Exposed Industries

30%

Latino neighborhoods

8% NL white neighborhoods

#### Health

Extreme heat poses serious health risks, especially for people with conditions like heart disease, asthma, diabetes, and obesity. These individuals are more vulnerable because heat places extra stress on the body, worsening symptoms and increasing the risk of medical emergencies.

% of Adults (18+) with Pre-Existing Conditions

11%

#### **Disadvantaged Communities**

The CA Environmental Protection Agency defines disadvantaged communities based on their environmental pollution burden and population characteristics. Under Senate Bill 535, revenue from CA's Cap-and-Trade Program is partly directed toward these communities through the CA Climate Investments program to reduce pollution, enhance climate resilience, and improve health and economic well-being.
